

iShare 6.0

Update

FAQs

What does iShare 6.0 offer?

iShare 6.0 includes upgrades of core components, including PostgreSQL, PostGIS, Python and MapServer. These will enhance security, provide bug fixes and improve iShare's performance. Improvements to Astun Data Services (ADS) due in mid-August 2024 are offered separately to this migration.

When will we be upgraded?

The first rollout of 6.0 is underway.

Our team will be in touch to agree an implementation date with you, unless you're already registered as an early adopter.

How can we get iShare 6.0?

All our iShare in the Cloud (iSiC) customers are eligible. We will discuss with you the best options for migrating necessary components with minimal disruption to core business.

Can we access release notes?

Yes. You can access these online [here](#).

Information about iShare 6.0

Sitting on optimised new hardware, iShare 6.0 will provide solid foundations for future releases. It brings updates to the core technologies used by iShare, along with iShare code improvements.

Other enhancements include Standard Layers (OGC) being supported in My House/My Nearest and Base Maps now supporting WMTS.

Migration path

The planned migration path is shown below.

SCAN

Scan your VPC to learn its configuration

TEST

Run automated tests on your data and report on quality

MIGRATE

Build new servers within your VPC and install all iShare 6.0 components. Migrate config and data

TEST

Re-run tests to make sure we have data integrity

RELEASE

Customer UAT and release
