iShare 6.0

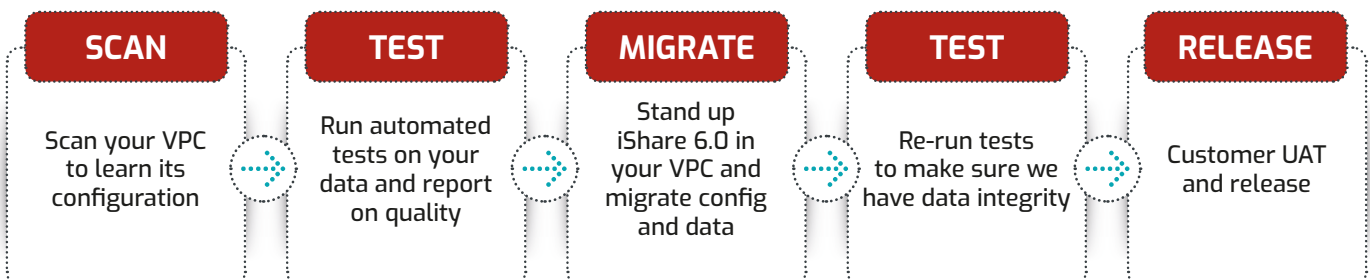

Information about the iShare 6.0 update

One of our biggest iShare releases to date, iShare 6.0 will provide solid foundations for future releases. It brings updates to the core technologies used by iShare, along with iShare code improvements.

Other enhancements include Standard Layers (OGC) being supported in My House/My Nearest and Base Maps now supporting WMTS.

Upgrade path

The planned upgrade path is shown below.

FAQs

What does iShare 6.0 offer?

iShare 6.0 includes upgrades of core components, including PostgreSQL, PostGIS, Python and MapServer. These will enhance security, provide bug fixes and improve iShare's performance.

When will we be upgraded?

The first rollout of 6.0 is underway.

Our team will be in touch to agree an implementation date with you, unless you're already registered as an early adopter.

Who is eligible for the upgrade?

All our iShare in the Cloud (iSiC) customers will receive the upgrade to 6.0 included in their package.

We will contact any on premise clients to discuss their migration options. There are many benefits to migrating to the cloud including reliability, security and operational simplicity.

Can we access release notes?

Yes. You can access these online here.
